## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

## **DETAILED ACTION**

### **Continued Examination Under 37 CFR 1.114**

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/24/2009 has been entered.

### **Information Disclosure Statement**

The information disclosure statement (IDS) submitted on 9/21/2005 has been considered by the examiner and further includes corrections to the U.S. Patent document cited for compliance purposes.

### **EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Tom Anderson on 1/26/2010.

The application has been amended as follows:

Claim 4 has been amended to recite: The method of claim 1 wherein ~~the analysis of the detected radiation identifying one or more features of the detected radiation~~ comprises determining a frequency spectrum from the detected radiation.

Claim 5 has been amended to recite: The method of claim 2 wherein ~~the analysis of the detected radiation identifying one or more features of the detected radiation~~ comprises obtaining a frequency spectrum at a number of predetermined frequencies and analyzing the spectra at the predetermined frequencies to determine if features of known explosive materials are present.

Claim 31 has been amended to recite: The method of claim 5 wherein ~~the analysis identifying one or more features of the detected radiation~~ comprises comparing the spectral intensity of the predetermined frequencies with expected intensities relating to one or more explosive materials/compositions.

Claim 40 has been amended to recite: The method of claim 1 wherein ~~the analysis identifying one or more features of the detected radiation~~ comprises: obtaining a measure relating to the time-of-flight of the detected radiation reflected off a rear surface of the object; obtaining a measure relating to the absorption of the objection from the time-of-flight measure; determining whether the object is an explosive material from the absorption measure.

In line 2 (actual count) of claims 42 and 43, the phrase “an optically-driven emitter for irradiating a sample” has been amended to recite “an optically-driven emitter for directly irradiating a sample”.

#### **Allowable Subject Matter**

Claims 1-5 and 30-44 are allowed.

The following is an examiner's statement of reasons for allowance:

With regards to claims 1, 2, 42, and 43, applicant's persuasive arguments presented overcome the rejections to the claims as well as the amendments to more clearly define the invention, namely wherein a method and apparatus comprises directly irradiating a sample comprising an object surrounded by a surrounding material and differentiating the detected signal to compensate for the effect of the surrounding material and identifying one or more features of the detected radiation which are indicative of a known explosive material.

In contrast, prior art such as Connelly et al. (US 2006/0022140) teaches a method for the detection of contraband using Thz radiation wherein the density and/or a physical property may be determined based on reflected or transmitted radiation. Connelly fails, however, to teach differentiating the detected signal to compensate for the effect of the surrounding material.

Similarly, Toth et al. (US 6,480,141) teaches a method of detecting contraband using microwave radiation wherein microwave radiation is used to detect the presence of contraband in a vehicle tire by comparing a detected signal to a baseline signal. Toth fails, however, to teach differentiating the detected signal to compensate for the effect of the surrounding material.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
